Abstract (en)

[origin: CA2830967A1] The invention relates to a system for emptying a container filled with free-flowing medium, comprising the following: a container (3) in which a product mass is homogenised by mixing; a discharge device (4) which is formed close to an inner wall of the container (3) and is introduced into the container (3) after the completion of the mixing, and a means (5) for applying pressure to the discharge device (4) in such a way that the discharge device presses the homogenised/mixed product mass downwards in the direction of the base of the container (3), where the homogenised/mixed product mass is discharged through an opened outlet valve of the container (3).
