Abstract (en)
[origin: WO2012143097A1] The invention relates to a sprayhead or hand spray, comprising jet exit openings (50) and "x" (x>1) valves (40, 41, 42, 43) that control the inflow of a fluid to the jet exit openings (50), wherein each valve (40, 41, 42, 43) is controllable independently of the other valves and comprises a movable valve body (402, 412, 422, 432), by means of which at least one first and one second valve position can be achieved, and for each of the "x" valves (40, 41, 42, 43) a pushbutton (401, 411, 421, 431) is provided for the control thereof, wherein on actuation of one or more pushbuttons (401, 411, 421, 431) the associated valve body (402, 412, 422, 432) is displaced. According to the invention, a control element (60) is provided, by means of which, on actuation of the same pushbutton or the same pushbuttons (401, 411, 421, 431), the position of the associated valve body (402, 412, 422, 432) is secured in the second valve position and/or all the other valve bodies (402, 412, 422, 432) are reset to the first valve position, the associated pushbutton (401, 411, 421, 431) of said other valve bodies being not actuated.
