Abstract (en)

[origin: WO2012143354A2] The invention relates to a device and a method for starting an internal combustion engine (10) that is arranged in a vehicle. For this purpose, the following are provided: an electric machine (24, 24') that is designed to drive the internal combustion engine (10) at least temporarily and a first storing unit (28, 28', 50) that is designed to store electric energy. Furthermore, an adjusting unit (26, 26') is provided via which the electric machine (24, 24') can be connected to the first storing unit (28, 28', 50). The adjusting unit (26, 26') is designed to detect at least one defined internal combustion engine operating state and/or at least one defined vehicle operating state and to adjust an electric variable at least dependent on the detected internal combustion engine operating state and/or the detected vehicle operating state, said electric variable determining an electric power that is drawn from the first storing unit (28, 28', 50) when the internal combustion engine (10) is driven by the electric machine (24, 24'), or to adjust the drawn electric power itself.
