Abstract (en)
[origin: WO2012143280A1] The invention aims to improve storage stability with regard to the enzymatic activity in a detergent or cleaning agent which contains a solid enzyme formulation. This is achieved by a detergent or cleaning agent comprising enzyme granules, wherein the granules comprise the following components in addition to the enzyme: (a) 68-90 wt % (w/w) of sulfate, in particular alkali metal sulfate, particularly preferably sodium sulfate, (b) 0.1-10.5 wt % (w/w) of polyethylene glycol, and (c) 0.5-14.5 wt % (w/w) of an auxiliary granulating agent.
