Abstract (en)

[origin: WO2012143186A1] The present invention relates to a process for producing a polycrystalline layer. This process comprises the steps of applying a layer sequence, comprising at least one amorphous starting layer provided with impurities, a metallic activator layer and a cleaning layer based on titanium or titanium oxide arranged between the starting layer and the activator layer for withdrawing the impurities from the starting layer, to a substrate; and carrying out a heat treatment after the layer sequence has been applied for forming a polycrystalline end layer.
