Abstract (en)

[origin: GB2488571A] An anchor bolt system (10) comprises a threaded rod (12) to be installed in a hole provided in a substrate and a drive receiving device (14) to be gripped by a rotary driving device to rotate the threaded rod (12) during installation in such a hole. The threaded rod (12) has a leading end (26), a trailing end (28), external threading (24) and a transverse surface (34) at the trailing end (28). The drive receiving device (14) is provided with a formation by which the drive receiving device (14) is releasably securable to the trailing end (28) of the threaded rod (12) and a stop surface to engage the transverse surface of the threaded rod (12).
