Abstract (en)
[origin: WO2012143191A1] The invention relates to an emergency stopping device, comprising a body (10), a control button (11) that is movable in translation along a control axis (X), at least one normally closed electrical contact unit (13), an actuation member (12) which can be actuated by said control button (11) so as to translate between a inoperative position and an actuated position, and which engages with the contact unit (13), a holding member (121) engaging with the actuation member (12) and capable of assuming a locking position for maintaining the actuation member in the actuated position thereof, and an unlocking ring (15) which is separate from the control button and which can be rotatably actuated, and which engages with the actuation member (12) so as to release the latter with a view to driving same toward the inoperative position thereof.
