Abstract (en)

[origin: EP2700334A1] The controller has a conductor arranged in a circuit board as a carrier for multiple electronic components, and a transmitting device for wireless transmission of control signals. An additional unit is utilized for selective battery operation or for connection of an electrical cable. A cover cap is fixed at an end of a housing by a hand without a cable connection. An end cap (5) is provided with cable connection, which is removable on housing end by hand and integral with a cable end (12). A plug-in cable connection (14) connects the cable to the circuit board.
