Abstract (en)

[origin: EP2700346A2] The appliance has a door device (16) which opens or closes an access opening (14) formed in interior of housing (12). A control device (18) controls the operation of appliance and. The control device is connected to an input device (20,22) which inputs operating parameters from the user to the door device, when housing is in closed state. A detection section (21a,21b,23a,23b) is arranged directly opposite to the input device for detecting the operating parameter input from user at the input mode and for detecting operation of the door device at door detection mode. An independent claim is included for method for controlling operation of electronic household appliance.
