Abstract (en)
[origin: EP2700782A1] The arrangement (100) has outer profiled half shells (11, 21) and inner profiled half shells (12, 22) connected with each other by insulating webs (13, 23). A gap (40) is formed in a stop region between a frame profile (10) and a wing profile (20). A gap cover device (30) comprises attachment elements (31, 31a, 31b, 32, 32a, 32b) for fastening at one of the half shells. The cover device covers an entire opening portion of the gap, and rests over a region against an abutment of an opposite profile. The cover device is integrally formed from ethylene propylene diene monomer.
