Abstract (en)

[origin: EP3527107A1] A table top sized and configured to nest with an adjacent table to reduce a height of a plurality of stacked tables in a nested configuration, the table top being constructed from molded plastic, the table top comprising: an upper portion; a lower portion; a perimeter; a receiving portion at least partially formed in the upper portion and the perimeter of the table top, the receiving portion disposed about the perimeter of the table top, the receiving portion including a sidewall with a height and a lower surface with a width, the receiving portion receiving an engaging portion of an adjacent table when the tables are disposed in a nested configuration; and a plurality of strengthening members disposed in the lower portion of the table top to support the receiving portion, each strengthening member of the plurality of strengthening members including an inner portion that contacts an inner portion of the receiving portion to provide additional strength and support for the receiving portion; wherein the upper portion, the lower portion, the perimeter, the receiving portion, and the plurality of strengthening members are integrally formed during a molding process as part of a unitary, one-piece construction.
