Abstract (en)
[origin: WO2012146616A1] Vacuum cleaner (1) comprising a body (2); a motor (3) disposed inside the body (2); a cleaning head (4) that is in contact with a surface to be cleaned; a transfer conduit (5) that is connected to the body (2) from one end and to the cleaning head (4) from the other end, sucking the dust particles on the surface to be cleaned into the body (2) by transferring the suction force created by the motor (3) to the cleaning head (4); a reservoir (6) disposed inside the body (2), into which liquid is filled; an inlet port (7) delivering the dirty air received in the body (2) via the transfer conduit (5) into the reservoir (6); and a cyclone unit (8) in a frustoconical form, disposed inside the reservoir (6) and extending along the reservoir (6) so as to be spaced apart from the reservoir (6), wherein the water entering into the cyclone unit (8) is prevented from being collected in the cyclone unit (8).
