Abstract (en)

[origin: WO2012146867A1] The invention relates to a medical device comprising a reusable or non-reusable surgical instrument made from metal, polymer or plastic, or any implant or prosthesis substitute made from metal, polymer or plastic, which is equipped with a marking system enabling rapid identification of the instrument. The marking system comprises: an RFID component called a "tag"; and a resin protuberance which is rigidly connected to the surgical instrument or implant substitute to be marked, said protuberance containing, and completely surrounding the tag.
