Abstract (en)

[origin: WO2012146446A1] The invention relates to a method for regulating the roll gap pressure of a roller press (1) and to a corresponding roller press. According to the invention, the roll gap pressure is regulated dependent on at least one oscillating movement that is measured on the roller press (1). This has the advantage that the roller press (1) can always be operated at the maximum roller press efficiency without the roller press (1) reaching the overload range.
