Abstract (en)

[origin: WO2012146536A1] The invention relates to a device for oiling preferably strip-shaped material (strip material), in particular punched strips, comprising at least one application roller, which turns in the running direction of the strip material, for applying oil to the strip material, an apparatus for coating the lateral surface of the application roller with oil and a dosing means for adjusting the thickness of the oil layer on the application roller. The invention further relates to a method that can be carried out with such a device.
