Abstract (en)

[origin: WO2012146492A1] The invention relates to a running gear unit of a rail vehicle, comprising a running gear frame (103.2) and a bearing device (106.3) for an anti-roll component (106.1) of an anti-roll device (106), wherein the running gear frame (103.2) defines a longitudinal running gear direction, a transverse running gear direction and a running gear height direction, and the bearing device (106.3) is connected to the running gear frame (103.2). The bearing device (106.3) forms at least one driver surface (106.9, 106.10) for an electromagnetic rail brake device (104) for driving the activated electromagnetic rail brake device (104) a driving direction.
