Abstract (en)
[origin: CA2834316A1] The invention relates to a device for cutting strappings (1) of cuboid bales (2) by means of at least one cutter bar (3) that can be moved toward the bale (2), wherein the bales (2) are guided along the cutter bar (3) by a conveying apparatus (5) and the cutter bar (3) is arranged on a side of the bales (2) that is directed perpendicularly to the conveying direction (4). Efficient cutting of all strappings (1) is to be made possible by arranging at least two cutter bars (3) on adjoining sides of the bales (2) and by guiding the cutter bars (3) in a traversing device (6) in the conveying direction (4) during the contact with the bales (2).
