Abstract (en)  
[origin: CA2848588A1] The invention relates to a packaging system for foodstuffs, having a container extending from a container base via a container casing, which itself extends around a container axis and preferably widens approximately in the manner of a truncated cone-shape, in the direction towards an upper container edge which extends around a container opening, and having a chamber containing the foodstuff, wherein the chamber has a chamber casing extending from the upper container edge in the direction towards the container base, disposed within the container casing and at least over a part of the axial chamber height at a radial distance from the container casing and extending around the container axis, and has a chamber base preferably disposed at an axial distance above the container base.
