Abstract (en)

[origin: WO2012146989A1] Described is an articulated arm measuring machine having five axes and able to reach a very high level of precision. The arms of the machine and the probe are balanced so the machine is safer and less subjected to the loads which the operator exerts to support it. The machine is designed for fixing to a movable tripod equipped with an adjustable extension, allowing parts to be measured on the machine.
