Abstract (en)  
A sun hat includes a hat body (3) which has a crown portion (31), a peak portion (32) extended forwards from the bottom of the crown portion and an annular brim portion (33) extended rearwards from two sides of the peak portion. The brim portion is embedded with at least one flexible wire (34) set by stitching. The sun hat thus formed not only can block sunshine, the brim portion also can be flipped upwards in a set profile through the flexible wire embedded inside, hence provides improved air ventilation to enhance comfort and usability.
