Abstract (en)

[origin: EP2702891A1] The clasp has a folding arm (2) whose one end (4) is attached to a bracelet strand (6) and another end (10) is articulated to pivot at end (14) of another folding arm (16). A cover (24) is provided with flaps (26a, 26b). A closing system has push-buttons (36a, 36b) for controlling a lock (42) pivotally mounted on the cover. The lock has a first hook (48) designed to cooperate with a second hook (50) and to maintain the second hook in blocked state when the push-button is not actuated manually. The first hook is maintained in engagement with the second hook by an elastic unit (52).
