Abstract (en)
[origin: EP2703070A2] The apparatus (100) has one and another conduits (101,102) for conveying one and another fluid mediums (106,107), where a valve (119) is provided in communication with the conduits. A position adjustable valve control body (113) is provided with an opening, where the quantity of one medium is transferred to another medium, while latter medium is mixed, by adjusting the control position of the valve control body by using the opening of the valve control body. The valve comprises a diaphragm actuator with a positioner for control position change of the valve control body. An independent claim is included for a method for the production of fluid mixtures.
