Abstract (en)
[origin: EP2703099A1] In a holder having a first arm (2) and having a second arm (3) that is connected by a swivel joint (4) to the first arm (2) such that it can rotate about an axis (A), the free end of the first arm (2) has a receptacle (9) for a joining device, and the free end of the second arm (3) has a receptacle (14) for a mating tool cooperating with the joining device. The position of the first arm (2) relative to the second arm (3) can be adjusted, at the swivel joint (4), in the longitudinal direction of the axis (A) by means of a first adjusting device and can be adjusted in a Y direction perpendicular to the axis (A) by means of a second adjusting device.
