Abstract (en)

[origin: EP2703249A1] The closure (22) has a closure pawl (10) mounted at a closure bearing (24). A screw (21), a displaceable plate (26) and a shaped plate connect a switch tongue with the closure bearing and are displaceably arranged in a head portion of the closure bearing. The screw and the plates are displaceably arranged above the closure pawl. The displaceable plate is guided in the head portion by fixing screws (30) that engage with oblong holes (28) in the closure bearing. An eccentric disk finely adjusts the shaped plate in a displacement direction.
