Abstract (en)

According to the invention, the process consists of bleaching textile materials from mixtures of cellulosic fibre, such as: (flax-cotton, hemp-cotton) until achieving a whiteness degree of 70-80%, which is carried out in two stages: in the first stage, the materials are treated in aqueous solution containing peroxy-POM catalysts { $(\text{NH}_4)_8[\text{Mo}_{10}\text{O}_{22}(\text{O}_2)_{12}]$; $\text{Na}_2[\text{MoO(O}_2)_2(\text{C}_2\text{O}_4)_2]$; $\text{MoO(O}_2)_2$; $\text{WO(O}_2)_2$ } in the presence of ionic surfactant and H_2O_2 , at the temperature of 70-90° C for 60-90 minutes, while in the second stage the material treated in the first stage is suspended in a solution containing 1,5-7 g NaOH , 0,2-1,3 g Na_2SiO_3 and 0,8-3,2 g H_2O_2 , for 1-1.5 hours at the temperature of 70-80°C, after which it is washed with cold water until it reaches neutral pH, and then it is air-dried.
