Abstract (en)

[origin: EP2703563A2] The system has partition attaching and detaching mechanisms comprising fixed pins and removable pins that are moved by levers. The partition is subdivided into low sized panels, where the panels are articulated along length direction of sectors and along height direction of superimposed rows. Pillar trimmers are screwed on the ground by a single threaded bar and maintained in position by using pins. Protection elements are placed at a base of the barrier to prevent displacement of a horizontal sealing joint during installation. A safety system prevents theft and manumission of partitions.
