Abstract (en)  
[origin: EP2703590A2] The hinge has a set of hinge arms, where one of the hinge arms includes a base surface and a side surface (6). Another hinge arm is swingably mounted on the former hinge arm. A rotational damper is fastened at the side surface of the former hinge arm. The latter hinge arm comprises a holding element overlapped with the side surface of the former hinge arm. The damper is attached in a damper bearing (16) to be fastened at side surface of the former hinge arm, where the bearing comprises separable housings (24, 25). An operating element (17) for damper is lengthwise-sliding fed in the bearing.
