Abstract (en)
[origin: EP2704128A2] The seal (1) has a first carrier layer (2) and a second carrier layer (3) which are connected to each other indirectly. The seal is fastened on a substrate (5). Indirect bonding between the first carrier layer and the second support layer is carried out in the dissociatable security area (6) and an inseparable composite area (7) such that, viewable irreversible detachment of the first carrier layer from the second carrier layer takes place in the security area, with the replacement experiment.
