Abstract (en)

A connector terminal (20, 20v) including first and second spring terminals (21, 22; 21v, 22v) between which a male connector terminal (110) of a male electric connector (100) is sandwiched, is characterized in that the connector terminal (20, 20v) is formed by bending a strip-shaped plate about lines (51, 52, 53, 54) intersecting with a longitudinal line (L1) of the plate such that a width of the plate is maintained as it is, and the first and second spring terminals (21, 22; 21v, 22v) are formed with a limiter (25) for preventing the first and second spring terminals (21, 22; 21v, 22v) from being outwardly deflected.
