Abstract (en)

[origin: WO2012150014A1] The invention relates to a semirigid pack made of thin cardboard that is formed by a precut part, which precut part comprises or forms a front wall (14), a back wall (15) and side walls (16, 17) adjacent to one another, and which comprises a edge trim (28) that is applied to one side, extends over the entire length and has folding flaps for a (bottom) wall (20). In the region of the edge trim (28), punch-outs in the form of scrap-free punched lines are formed, in particular transverse cutting lines for folding flaps and curved compensation punch-outs. As a result, the pack can be produced in a scrap-free and residue-free manner from a precut part that is detached from a material web (34).
