Abstract (en)

[origin: WO2012154111A1] The present invention concerns a system of building elements to form different erect constructions. The system comprises columns and cross beams (24). The columns are formed of two or four elongated L-plates (1). Each L-plate (1) has two elongated parts arranged mutually perpendicular. The L-plates (1) of each column are connected to each other by means of column fittings (3, 7, 11).
