Abstract (en)
[origin: WO2012150159A2] The invention relates to a heat-insulating wall (21; 51), in particular for a refrigeration device, comprising a heat-insulating core (22), which has first and second main surfaces (25; 27) that lie opposite of one another and at least one narrow side (26) that connects the main surfaces (25; 27), and a covering element (23) formed from a cut of flat material. The covering element extends on at least the first main surface (25) and the narrow side (26) and has several layers (35, 36, 37) of the flat material lying one over the other at least locally on the narrow side (26).
