Abstract (en)
[origin: WO2012152293A1] An inventory management comprises a set of inventory identifications, at least one of them comprising a radiofrequency transponder, a set of storage containers, one, two or more containers for removed inventory identifications, each one comprising at least one antenna, at least one radiofrequency interrogator capable of communicating with the radiofrequency transponders and means for avoiding that the container for removed inventory identifications identifies the transponder of inventory identifications placed at or in storage containers and/or at a support structure. A method for using an inventory management system and a storage container that can be used in an inventory management system are also disclosed.
