Abstract (en)
A multi-function garment (2) comprises an article of clothing (21) and pockets (22) disposed thereon. Each pocket (22) includes an opening (221), a lining (222), and a two-sided engaging unit (223). The lining (222) of one pocket (22) comprises a storage body (222D), an open external vacancy (222E) disposed on the storage body (222D), and an inner vacancy (222F) having one end close and the other end communicated with the external vacancy (222E). A dimension of the external vacancy (222E) is smaller than a dimension of the inner vacancy (222F), and a protecting layer (P) is disposed on an inner surface (222A) of the lining (222). Besides a wearing function of sheltering users' skin, the interior of the lining (222) can be reversed outward to allow the clothing (21) to stuff the storage body (222D), which is then converted into a neck pillow configuration for achieving the multiple function of using. The structure of the garment is also compact and easy to carry.
