Abstract (en)
The present invention provides a method for installing dry cladding on a flat structural surface, which method comprises the successive steps of A effecting the fixation of foam-like insulation panels to a flat structural surface of a building, wherein aligned brackets are provided on the side of the insulation panels remote from the supporting surface, each bracket having at least one connecting leg that is directed outward, at least substantially perpendicularly to the supporting surface, B connecting fixing means oriented parallel to each other to the at least one connecting leg of the brackets, C connecting the dry wall cladding to the fixing means on the side remote from the supporting surface. The invention further provides an insulation panel for use in such a method, and a method for producing such an insulation panel. The invention also provides an insulation panel and a method for producing an insulation panel.
