Abstract (en)

[origin: EP2706175A2] The multi-point lock has a push rod (6) that is arranged in housing (1). A pin (18) of the push rod is guided in a control cam (17). A bolt (16) is operated through pin by a nut (8). A blocking segment (2) is in an operative connection to the push rod. The change-over levers (19,20) are connected to a latch retraction lever (11). A lock cylinder is moved from locked position to the open position over the change-over levers. The movement of the bolt and a catch (12) is performed simultaneously in the unlocking operation.
