Abstract (en)
[origin: EP2706260A2] The transmission device (10) has a wet-running clutch (12) which is designed as starting clutch and connected to a drive side of clutch input element (19). The clutch output portion (20) is in contact with clutch input element by the friction surface (22). A damping device (34) is provided for eradication of torsional vibrations. The damping device is provided with a pendulum mass support (38) and damper mass (40). The pendulum mass support provided radially outside of friction surface is connected with clutch output portion through a gearing (44).
