Abstract (en)

[origin: WO2012156628A1] The invention relates to a heating container for reheating food and to a transportable device including such a heating container. The heating container comprises a base (3) and a side wall (6) that extends up from the base (3). The base (3) includes an inner surface (4) intended to receive food and an outer surface (5) provided with at least one screen-printed resistive track (7), said screen-printed resistive track (7) having two ends which are each connected to an electrical bonding pad (8a, 8b) for supplying same with power. According to the invention, the heating container (2) is made entirely from glass.
