Abstract (en)
[origin: WO2012158104A1] The present invention relates to a method for golf score registration in a golf score registration system (1) comprising a terminal (15) located in or near a clubhouse and/or a start box at first tee with a console (12a, 12b) that allows each player to check into and check out of the system before and after a game of golf, tee boxes located near each tee on the course with a console (12b,..., 12n) that allows each player to enter scoring information from the previously completed hole, means for communication (14) between boxes on the course and a central unit (13), and individual information carriers that each player bring on to the course while playing. Each console (12a, 12b,..., 12n) has at least two readers through which it can communicate with the information carriers, and a display indicating the function of respective reader. A first console for the start of a golf game provides the option to play a game with markers for at least a first and second player, and the first console requests information on who is marking each player in said game.
