Abstract (en)

[origin: WO2012155950A1] The invention relates to a plasterboard production facility, comprising at least one circulating conveyor belt device (10) for receiving a plaster layer (16) and for moulding and hardening the plaster layer (16), wherein the conveyor belt device (10) comprises a support belt (11) for supporting the plaster layer (16) having an outer face (50), to which outer face the plaster layer (16) is applied during operation, and having an inner face (60), wherein at least a plurality of moulding bars (12) are provided, wherein the moulding bars (12) are mounted on the outer face of the support belt (11) transversely to a running direction of the conveyer belt device (10) in a uniformly spaced manner and constitute part of the outer face (50) of the conveyor belt device (10), such that the moulding bars (12) circulate with the conveyor belt device.
