Abstract (en)

[origin: WO2012152375A1] The invention relates to a method for operating a plant for producing tablets, which has at least one rotary press and a computer system, wherein the computer system contains operating and control software for controlling and monitoring the operation of the rotary press, and wherein the rotary press is designed for the installation of different types of rotors, wherein a data record matched to each rotor type is stored in a memory and communication component on the rotors and, before the rotor type is put into operation, the data record is read and stored in the computer system in order to automatically match the operating and control software and user interface to the rotor type.
