Abstract (en)

[origin: WO2012152427A2] The invention relates to a device for fixing a headrest to a seat of a vehicle, in particular of a motor vehicle, the headrest having at least one, typically two, retaining rods which are pushed into associated receiving sleeves, the receiving sleeves being fixed to the vehicle seat by connecting elements and the receiving sleeve having a connecting section which is connected, in particular welded, to the connecting element. According to the invention, the connecting section of the receiving sleeve and the connecting element are configured, in the area in which said connecting element is contacted by the connecting section, in such a way that, in the event of a displacement of the connecting element along the connecting section, the angle of the connecting element with respect to the receiving sleeve changes. As a result, a particularly flexibly usable device for fixing a headrest to a seat of a vehicle is provided.
