Abstract (en)

[origin: WO2012158031A1] The present invention relates to a wall construction and to a building having such a wall construction. The invention further relates to a method for constructing a building. According to the invention, there is provided a wall construction which comprises a stack of building blocks, through which a hole extends. In said through hole, column reinforcing means are provided, which are connected, by means of a cured construction material, such as concrete, to anchoring means projecting from the base.
