Abstract (en)
[origin: EP2708220A2] The bottle sleeve has a cylindrical sleeve (2) made of elastomer material i.e. silicone elastomer, for holding a baby bottle (22). The cylindrical sleeve includes a top opening for a top end region of the baby bottle extending out of the cylindrical sleeve, and a cutout (8) extending downward from an edge of the top opening that is opened for inserting and removing the baby bottle. Closable and openable closing units fix the cutout in a closed position and release the cutout in an open state when the closable and openable closing units are in a closed state so that the cutout is opened. The closable and openable closing units are a button (14) and a buttonhole, respectively.
