Abstract (en)

[origin: EP2708325A1] The device has a rotatably mounted rotary table (11) that is provided with clamping units (12) for clamping a workpiece (13). The rotary table is rotatably moved into processing regions of processing stations. A drive unit (18) is mounted onto processing station finish tool (14) that is moved to feasible position. A circumference of rotary table is provided with supply pipe (24) that is connected to central supply station (20).
