Abstract (en)

[origin: EP2708450A1] The frame has C-shaped main section (1) which is provided with free legs (3a,3b) and is connected with a central leg (4). The opposite cranks (5) are arranged in the free end portion of the upper free leg for placement of a loading floor (24). The transition towards the upper free leg of the central leg is provided with an open recess portion (6), such that upper free end opposite to the lower free end is set at a distance. The longitudinal direction of the main section is provided with openings, such that upper dent leg and lower dent leg are aligned with upper free leg. Independent claims are included for the following: (1) vehicle; (2) modular kit; and (3) method for manufacturing outer frame.
