Abstract (en)
The present invention provides a container (10) for holding product therein during shipment that comprises a metal frame having a bottom and two sides or a body (12) having a base (14) and at least two walls (16), in particular made of plastic material. A generally L-shaped stationary track (5) is secured to each side of the metal frame or, as the case may be, generally L-shaped stationary tracks (5) are secured to opposed walls of the body. Each of the generally L-shaped stationary tracks (5) has a substantially horizontally oriented portion (46) located proximate the open top of the container and a substantially vertically oriented portion (60) located proximate the front of the container where a door (34) may be located, dunnage (106) being supported by a plurality of moveable support member assemblies (66) slidable along said tracks (5).
