Abstract (en)

[origin: EP2708687A1] The construction kit has a lever arm (1h) or lever arm pair for rotatable bearing of an operating rod (1), which is horizontal to a door wing in an installation position and has a bearing device (2), in which the operating rod is movably mounted. The operating rod is designed as a handle bar and is rotatable around a horizontal axis of rotation of the bearing device. The operating rod is designed as a pressure rod, which is displaced in the bearing device perpendicular to the plane of the door wing. The bearing device forms a component of the construction kit.
