Abstract (en)

[origin: EP2708692A2] The fitting (1) has a wing support arm (8) articulated at a bearing tape (7) and a wind corner bearing (5) fastened at a wing side and to a wing swivel bearing (6). An issuing device (10) is coupled with the bearing tape and the wing support arm. A wing pivots relative to the bearing tape by the wing swivel bearing, where the fitting is designed such that pivoting angle formed between the bearing tape and the wing support arm remains unchanged with the wing pivoting about 90-135 degrees.
