Abstract (en)
[origin: EP2708798A1] The module (100) has optical elements including a toric output lens (108) and concave reflectors (102, 102') associated with a folder having a reflecting face for folding light beams generated by light sources i.e. LEDs (104, 104') located in the concave reflectors. The optical elements are arranged to converge the light beams generated by the LEDs at focal points (106, 106') prior to the transmission of the light beams by the output lens, where the concave reflectors are oriented towards each other. An independent claim is also included for a method for manufacturing a lighting module for forming a wide light beam in a headlight of a motor vehicle.
